

# **ABSTRACT OF THE DISCLOSURE**

A method of selecting an image bearing product that requires a particular size of a digital image includes a user providing a high resolution digital image in a memory at a first location; a service provider providing information  
5 which is displayed at the first location, such displayed information including a plurality of options for image bearing products that can be provided by the service provider that require different sized digital images; the user selecting at least one image bearing product to be provided by the service provider after viewing the  
10 displayed images; converting the high resolution to a smaller sized digital image corresponding to the selected image bearing product; and utilizing the smaller sized digital image to provide the selected image bearing product to the user.
